

Notice of Project Commencement Trowbridge Street Construction

January 23, 2024

Dear Property Owner/Resident,

The Municipality of Meaford has engaged GSS Engineering Consultants Limited to complete preliminary and detailed design for Reconstruction of Trowbridge Street West and Cook Street.

The design phase of the project is expected to be completed in 2024 and construction is anticipated between April 2025 and November 2025

The project will include the **reconstruction** of **Trowbridge Street West** from Sykes Street North to Owen Street and **Cook Street** from Trowbridge Street West to Berry Street. The reconstruction work will address aging and deteriorated infrastructure such as sanitary sewers, storm sewers, water, sidewalks, and the asphalt roadway.

How will the project impact you?

- Surveying:** To document existing surface features and property bars within the Right-of-Way and adjacent residential properties.
- Soil Testing:** Drilling operations will be completed to identify existing underground soil and water conditions and will require temporary disruption to traffic flow to complete.
- Utility Locates:** Utility companies will be marking the location of their underground infrastructure such as water and sanitary services, gas, hydro, telecommunications, etc. Flags or temporary paint may be used to mark the locations. It may also require excavation by a Hydrovac Truck.
- Tree Inventory:** Arborists will complete an assessment of trees within and adjacent to the Right-of-Way and may place temporary flags or paint to trees within the project area.
- Pre-Construction Crack Survey:** Prior to construction a consultant shall take interior and exterior photos of your buildings to document any existing cracks/damages to monitor if they will be further damaged by construction activities. During construction, some basements may be provided with vibration monitors to ensure excessive vibrations do not damage building structure. These examinations are voluntary.

Notice of Project Commencement Trowbridge Street Construction

How can you help?

Property owners should remove private landscape features within the road right-of-way prior to construction and are also encouraged to notify the project team of any sump pump or downspout discharge pipes, subdrains, sprinklers, underground dog fence or other similar features within the road right-of-way that may be disturbed during construction.
